PRACTICAL– 12 AI-Powered Software Testing

1. AI Prompt :

I want to do my Tutorial 12 practical on AI powered software testing. The requirement is that a registered user can login with correct email and password. If the user enters wrong details, it should show an error message.

Website: https://shop.qaautomationlabs.com/

Please help me to make test cases, test data and Selenium Python code for this login page. Also tell me possible defects and how to test them. Explain in simple language because I am a beginner.

2. AI-Generated Test Cases :

Test Case	Test data	Expected result
TC-01: Valid login	`demo@demo.com` / `demo`	User successfully logs in
TC-02: Wrong password	`demo@demo.com` / `wrong123`	Error message appears
TC-03: Wrong email	`wrong@example.com` / `demo`	Error message appears
TC-04: Empty email	Blank email / `demo`	Validation message appears
TC-05: Empty password	`demo@demo.com` / Blank password	Validation message appears

3. Test data

You can use this test data in your practical report.

Variable	Value
Valid email	`demo@demo.com`
Valid password	`demo`
Invalid email	`unknown@example.com`
Invalid password	`Wrong123`
Invalid email format	`demoexample.com`
Empty email	`""`
Empty password	`""`

4. AI-Generated/Reviewed Selenium Code

Python

Run

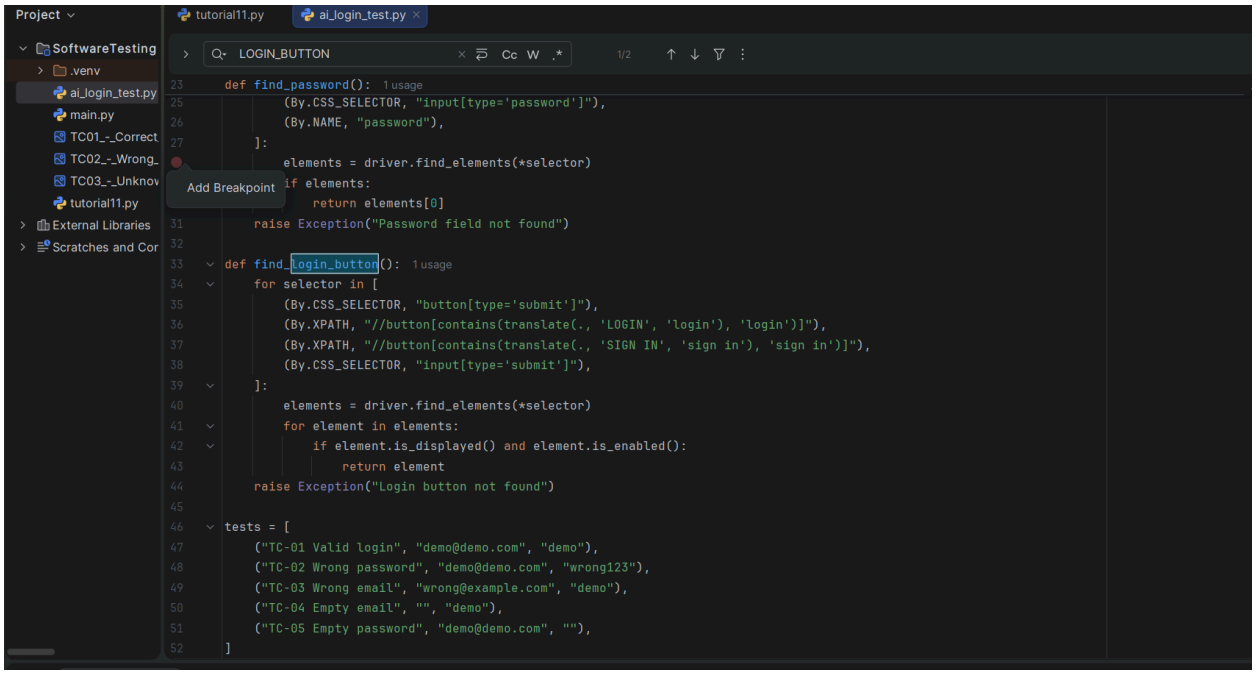

```python
from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.support.ui import WebDriverWait
from selenium.webdriver.support import expected_conditions as EC

URL = "https://shop.qaautomationlabs.com/"

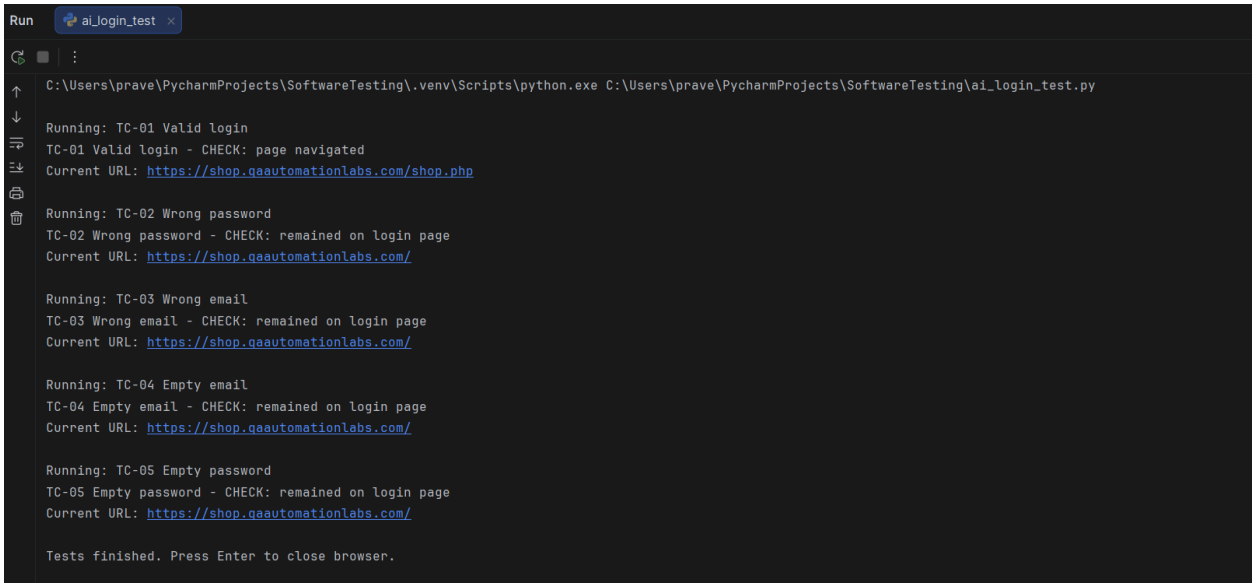

driver = webdriver.Chrome()
wait = WebDriverWait(driver, 15)

def find_email():
    for selector in [
        (By.CSS_SELECTOR, "input[type='email']"),
        (By.NAME, "email"),
        (By.PLACEHOLDER, "Email"),
    ]:
        elements = driver.find_elements(*selector)
        if elements:
            return elements[0]
    raise Exception("Email field not found")
```

5. PyCharm Source Code

7. PyCharm Console Output

6. Browser Execution
